

Potential ED pesticides in leek

Long-term exposure data

Sources : EFSA (2009) and KEMI List (2008)

ED pesticides, approved in the EU	Amount in leek (mg/kg)
bifenthrin	0,0123
carbendazim and benomyl	0,0136
chlorothalonil	0,0201
cypermethrin (sum)*	0,0174
dithiocarbamates (mancozeb)**	0,4467
iprodione	0,0121
linuron	0,0133
myclobutanil	0,0096
propamocarb (sum)*	0,0177
pyrimethanil	0,0121
tebuconazole	0,0226
Total	0,5975

* "Sum" means that EFSA calculated a sum of similarly acting chemicals.

** Here, the "sum" is the sum of the individual amounts of dithiocarbamate chemicals, including mancozeb.
